Profile

Data Scientist with strong experience applying statistical analysis and machine learning to solve complex product and business problems. Proven track record of building end-to-end analytics pipelines, developing predictive models, running experiments (A/B testing), and translating insights into measurable product improvements. Experienced in collaborating with Product Managers, Engineers, and UX teams to define success metrics, influence product direction, and drive data-informed decisions at scale.

Professional Experience

Team Leader
Matrimony.com
05/2025 – 11/2025 | Chennai, India

- Supported classification and regression use cases by preparing high-quality analytical datasets, performing feature engineering, and validating data inputs for predictive modeling and inference.
- Analyzed system and operational performance metrics to identify optimization opportunities, contributing insights that informed model evaluation criteria and business KPIs.

Team Lead
Gusto software solutions Pvt, Ltd
05/2024 – 05/2025 | Hyderabad, India

- Evaluated the impact of process changes by comparing pre- and post-implementation metrics, effectively supporting experimentation and continuous optimization initiatives.
- Managed and monitored ML model performance in production, working closely with product teams to evaluate statistical accuracy, error patterns, and real-world outcomes, and to identify high-impact use cases for continuous model improvement.

Technical Support Specialist
Concentrix Technologies Pvt Ltd.
05/2023 – 04/2024 | Bangalore, India

- Prepared and validated infrastructure and support datasets for downstream analytical modeling by cleaning, structuring, and standardizing incident data.
- Analyzed large-scale support datasets to identify recurring issue patterns, frequency distributions, and trend deviations, enabling data-backed recommendations to improve customer experience and system reliability.

Customer Service Representative
IEnergizer Pvt Ltd
06/2022 – 04/2023 | Bangalore, India

- Conducted analytical evaluation of customer order datasets to identify fraud patterns and anomalies, supporting reduction of false positives through quantitative analysis.
- Developed and delivered Root Cause Analysis (RCA) reports using statistical summaries, data visualization, and performance metrics to guide operational and management decision-making. Collaborated closely with clients and internal teams to translate analytical findings into actionable.

Education

B.com Computer Applications
Sri Venkateswara University, Tirupathi 
09/2022

Skills

Python
Advanced mastery of Pandas and NumPy for data manipulation, paired with a strong foundation in Scikit-learn for predictive modeling. Strong technical foundation in Pythonic programming and statistical analysis. Expert at performing exploratory data analysis (EDA), cleaning complex datasets with Pandas, and implementing supervised learning algorithms. Familiar with version control via Git.

Statistics
Inferential statistics and probability theory. Expert at moving beyond surface-level data to identify true patterns through hypothesis testing, A/B experimental design, and regression analysis.

Data wrangling and Database management
Expertise in end-to-end data wrangling and database management. Proficient in using SQL to extract and transform data from diverse sources for seamless integration into data warehouse systems. Identifying key patterns and trends while ensuring data integrity.

Machine learning
Adept at synthesizing complex datasets to identify patterns and predict future outcomes, enabling proactive business strategies. Committed to leveraging advanced modeling techniques to automate data gathering and enhance the accuracy of long-term organizational projections."

Projects

House Price prediction model 
Developed an end-to-end predictive modeling pipeline in Python to estimate residential property values, beginning with rigorous Exploratory Data Analysis (EDA) to handle skewness, identify outliers, and map feature correlations. Engineered high-impact variables through strategic imputation, One-Hot encoding, and feature scaling to transform raw data into a model ready format.

Customer-churn-prediction-ML-pipeline 
Engineered an end-to-end Customer Churn Prediction system using Python, beginning with a rigorous EDA that utilized cohort analysis and feature interaction maps to identify key drivers of attrition. Developed a fully automated MLOps pipeline using Apache Airflow to orchestrate daily ETL tasks, data validation, and model retraining, enabling real-time risk scoring and providing stakeholders with a Streamlit dashboard for actionable retention insights.
